

BRAVO Consent Form

I consent to having BRAVO Wireless PH Monitoring.

Bravo wireless Ph monitoring exam of the esophagus to determine the level of acidity in the esophagus. It is not intended to examine the stomach, small bowel, or colon. It does not replace upper endoscopy or colonoscopy.

I understand that there are risks associated with any endoscopy examination. Potential complication associated with Bravo pH capsule includes failure of the pH capsule to detach from the esophagus within several days after placement, which may necessitate endoscopic removal. The safe and efficacy of the Bravo pH capsule with delivery system has not been established for pediatric use.

Patients should not eat after midnight and no liquids for a minimum of 4 hours prior to the procedure.

I am aware that I should avoid MRI machines for 30 days after the placement of the Bravo Capsule.

It is possible that due to interference some data may be lost and this may result in the need to repeat the Bravo procedure.

I understand that data gathered from my Bravo study may be used, under complete confidentiality, for educational purposes in future medical studies.
